

High-Tech for everybody...

... HSK-PLUS as the ultimate step into the highest quality level of die boards

Perfect and Innovative:

High-quality packaging boxes require stabilized die boards.

Two integrated steel frames reinforce two separate boards in a perfect way and create a very high dimensional stability. The wooden material of the two forms keep the knife at its place and a premium combination of high dimension precision, very high form stability and long lifetime is achieved. In addition the HSK-PLUS die form is enforced with an additional steel plate on top to achieve maximum reknifings for long run jobs with highest demands of precision.

These stabilized die forms are designed for steel counter plates with very small tolerances and up to 12 reknifings and the HSK-PLUS version is the ultimate technology level of the R+S die board family.

Advantages:

- HSK: Wood-Steel-Compound, the optimum combination in stability and durability
- Double reinforced with steel grids
- Additional steel plate in top for maximum reknifings
- Perfect for steel counter plates and high-volume runs with highest precision demands
- Up to 12 reknifings possible

Perfection as the sum of most progressive technologies
